No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (Operations Staff, P.O. Box 765, Schenectady, New York 12301), for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1978 articles are the same as those shown for current articles.

CONTENTS OF VOLUME 91

NUMBER 1, NOVEMBER 1978

JAMES K. W. MARDIAN AND IRVIN ISENBERG. Preparative Gel Electrophoresis: Detection, Excision, and Elution of Protein Bands from Unstained Gels 1

CHIANG TUNG CHANG, CHUEN-SHANG, C. WU, AND JEN TSI YANG. Circular Dichroic Analysis of Protein Conformation: Inclusion of the β-Turns 13

J. M. BOEYNAEMS AND F. R. L. CANTRAINE. A New Method to Characterize Saturation Functions by Their First Four Moments 32

JIM C. WILLIAMS, HARUTOSHI KIZAKI, EMILIO WEISS, AND GEORGE WEBER. Improved Radioisotopic Assay for Cytidine 5′-Triphosphate Synthetase (EC 6.3.4.2) 46

R. A. CORRADINO. A Simple Technique for the Measurement of Unidirectional Calcium Influx at the Mucosal Surface of Organ-Cultured Embryonic Chick Duodenum 60

MANUEL KIPER. A Quick Hydroxyapatite Chromatography Technique Especially Adapted for Work with DNA Networks 70

HARRY W. MESLAR AND HAROLD B. WHITE, III. Preparation of Lipid-Free Protein Extracts of Egg Yolk 75

HERBERT L. BONKOWSKY AND JOANNE S. POMEROY. Assay of δ-Aminolevulinic Acid Synthetase in Homogenates of Mouse, Rat, and Human Liver: Species Differences in Requirement for an Exogenous Succinyl-CoA-Generating System 82

IAN MCMURROUGH AND JUNE MCDOWELL. Chromatographic Separation and Automated Analysis of Flavanols 92

PRABHAVATHI B. FERNANDES, RONALD V. NARDI, AND SAMUEL G. FRANKLIN. The Resolution of Membrane Proteins Based upon Size, Charge, and Hydrophobicity .. 101

P. A. ABRAHAM AND W. H. CARNES. Chromatographic Purification of Soluble Elastin 115

MARCO BAGGIOLINI, BEATRICE DEWALD, AND URSULA BRETZ. A Volume Adapter for Use in a B-XIV Zonal Rotor 123

RAMI ALMOG AND TERRY L. SHIREY. A Modified Orcinol Test for the Specific Determination of RNA 130

DAVID B. JOHNSON, JAMES F. ENGEL, EVELYN E. MURRILL, PATRICK E. GUIRE, CHARLES W. BARKER, CINDY M. BARDWELL, ALICE Y. SHAN, MELVIN J. SWANSON, AND JACQUELINE G. STONE-HEURNER. Preparation, Isolation, Analysis, and Characterization of 3-Benzo[*a*]pyrenyl-β-D-glucopyranosiduronic Acid: A Metabolite of 3-Hydroxybenzo[*a*]pyrene with Potentially High Carcinogenic Activity 138

JANE E. SALMON, URI NUDEL, GINO SCHILIRO, CLAYTON L. NATTA, AND ARTHUR BANK. Quantitation of Human Globin Chain Synthesis by Cellulose Acetate Electrophoresis 146

JOHN HEPTINSTALL, PHILIP J. WARD, AND IAN C. HANCOCK. The Enzymic Synthesis of β-[^{32}P]UDP-*N*-Acetylglucosamine 158

LINDA C. STILLMAN AND MERRILL L. GASSMAN. Protoheme Extraction from Plant Tissue 166

DAVID L. WILLIAMS AND HANNA KLETT. Measurement of Polyadenylic Acid by Hybridization with Polyuridylic Acid: A Source of Error Due to the Lability of Tritiated Polyuridylic Acid in Trichloroacetic Acid 173

N. S. NADI AND F. L. MARGOLIS. A Simple Method for the Elimination of Amine Contaminants in Buffers for Single-Column Amino Acid Analysis in Physiological Samples at Picomole Levels 180

J. Umemoto, K. L. Matta, J. J. Barlow, and V. P. Bhavanandan. Action of Endo-α-*N*-acetyl-D-galactosaminidase on Synthetic Glycosides Including Chromogenic Substrates 186
William D. Shepherd and Samuel Kaplan. A Rapid Method for the Isolation of Intracytoplasmic Membranes from *Rhodopseudomonas sphaeroides* Using an Air-Driven Ultracentrifuge 194
A. C. Richards, F. A. Shamgar, and F. D. Collins. Automatic Collector of Expired $^{14}CO_2$ for Liquid Scintillation Counting 199
Kenneth A. Thomas and Alan N. Schechter. Direct Physical Measurements on Substituted Agarose Gels: Evidence for Intercalation of Gel-Bound Ethidium into Transfer RNA 209
Keith J. Ellis. Mercury Contamination during pH Measurement and Its Effect on Creatine Kinase Activity 224
Oscar H. Kapp and Serge N. Vinogradov. Removal of Sodium Dodecyl Sulfate from Proteins 230
Jean-Claude Cavadore. *N*-Thiobenzoylsuccinimide as Thioacylating Reagent in the Sequential Analysis of Peptides by the Solid Phase Technique 236
Olof Tottmar, Hans Marchner, and Hans Pettersson. Determination of Acetaldehyde in Rat Blood by the Use of Rat Liver Aldehyde Dehydrogenase ... 241
J. M. C. Gutteridge and T. R. Tickner. The Characterisation of Thiobarbituric Acid Reactivity in Human Plasma and Urine 250
Elizabeth B. Albright, Thaddeus S. Nowak, Jr., and Hamish N. Munro. Assessment of Counting Efficiencies for Labeled Protein and Other Macromolecules in Filter Disk Assays 258
Victor R. Villanueva and Ramesh C. Adlakha. Automated Analysis of Common Basic Amino Acids, Mono-, Di-, and Polyamines, Phenolicamines, and Indoleamines in Crude Biological Samples 264
Edward C. Hayes, Larry L. Wright, and Hans J. Zweerink. Staphylococcal Protein A–Sepharose Columns and the Characterization of Measles Virus-Specific Polypeptides in Persistently Infected Cells 276
Michael J. Marshall and Michael Worsfold. Analytical Micro-preparative Electrophoresis: Quantitation of Phosphoglucose Isomerase Isoenzymes 283
Andre P. De Leenheer and Annie A. Cruyl. Vitamin D_3 in Plasma: Quantitation by Mass Fragmentography 293
Miladin M. Vrbaški, Bojana Grujić-Injac, and Danica Gajić. A New Method for Allantoin Determination and Its Application in Allantoin Determination in *Agrostemma githago* L. Seed 304
J. Gabarro. Numerical Analysis of Thermal Denaturation of Nucleic Acids 309
K. D. Neame. Sources of Error in the Channels Ratio Method for Efficiency Determination in Liquid Scintillation Counting 323

Short Communications

R. C. Emery, R. V. G. Gwilliam, K. D. Wilford, and C. J. Threlfall. A Further Modified Tissue Homogenizer 340

INFORMATION FOR AUTHORS

Analytical Biochemistry will publish articles on methods of interest to the biochemical sciences and all fields that impinge on biochemical investigation, including those areas of immunology that include analytical and preparative methods for application by biochemists, cell and tissue culture techniques, and purification methods for specific enzymes and other proteins when such work has resulted in a high level of purity. Areas such as methods for sequencing and synthesizing DNA and RNA will be included. Invited review articles dealing with timely topics in methodology will also be published. In addition, a new book reviews section, covering titles directly related to the scope of the Journal and, specifically, to analytical and preparative methods in biochemistry and such impinging fields as immunology and tissue culture, will soon appear.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted to **Analytical Biochemistry, Editorial Office, 111 Fifth Avenue, New York, N. Y. 10003.**

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. At least three copies should be submitted, each copy to include all figures and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about 8½ × 11 inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 35 letters and spaces), an abstract (50–150 words), and address to which proof should be mailed. Please number all pages of manuscript.

Authors are encouraged to use descriptive subheadings in this order: Abstract, Introductory statement (no heading), Methods, Results, Discussion, Acknowledgments, and References.

Units of weights, measures, etc., when used in conjunction with numerals should be abbreviated and unpunctuated (e.g., 10%, 50 ml, 3 g, 8 cm).

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the *Archives of Biochemistry and Biophysics* Information for Authors, appearing in the January issues of that journal.

In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for the engraver. A convenient size for drawings is 8½ × 11 inches (21 × 27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final engraving should be inked in black.

Photographs must be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals

in order of mention in the text. All tables should have descriptive headings, typed (double-spaced) above the table.

Footnotes should be designated in text by superscript numbers and listed on a separate sheet; in tables, by superscript letters and placed at bottom of page containing table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in Chemical Abstracts' *Service Source Index* (1969 Edition). Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Chattoraj, D. K., and Bull, H. B. (1971) *Arch. Biochem. Biophys.* **142,** 363–370.
2. Gottschalk, A. (1960) *in* The Enzymes (Boyer, R. D., Lardy, H. A., and Myrback, K., eds.), 2nd ed., Vol. 2, pp. 461–467, Academic Press, New York.
3. Meister, A. (1957) The Biochemistry of Amino Acids, p. 298, Academic Press, New York.

Proofs. Galley proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge.
